CyberData VoIP Speakers Interoperate with 3Com's VCX IBM Series IP-PBX

MONTEREY, Calif. CyberData Corporation announces the interoperability of its VoIP Speaker with 3Com IP Telephony Suite. CyberData SIP-based VoIP Speakers are now tested and certified to work with 3Com's VCX IBM X Series IP-PBX (*see [App Note](#)*). The testing with 3Com's VCX demonstrated that CyberData IP speakers are able to support multicast paging in SIP. The successful completion of product testing in 3Com's test lab is expected to accelerate the widespread deployment of CyberData's VoIP public address loudspeakers for customers using 3Com IP telephony networks.

About CyberData Corporation

CyberData Corporation designs and manufactures peripheral devices for VoIP phone systems. We build products that facilitate legacy migration to VoIP, IP equivalents to existing analog devices, and application specific endpoints that add new functionality. Our VoIP products, such as Paging Gateways, IP Speakers, IP authentication devices are cost-effective and easy to manage solutions for VoIP phone systems.
