#### CyberData Joins Digium Partner Program

MONTEREY, Calif. CyberData Corporation announces the interoperability of its VoIP Speaker with Digium's Asterisk Business Edition open source PBX. CyberData VoIP Speaker are now formally tested and certified to work with Asterisk Business Edition. The certification demonstrates CyberData's commitment to ensure that Asterisk Business Edition® users will experience a high level of quality and ease when integrating CyberData VoIP Speaker with Digium's Asterisk Business Edition.

CyberData Corporation designs and manufactures peripheral devices for VoIP phone systems. We build products that facilitate legacy migration to VoIP, IP equivalents to existing analog devices, and application specific endpoints that add new functionality. Our VoIP products, such as Paging Gateways, IP Speakers, IP authentication devices are cost-effective and easy to manage solutions for VoIP phone systems.

Digium is the creator and primary developer of Asterisk, the industry's first Open Source PBX and Asterisk Business Edition, the professional-grade version of Asterisk. Used in combination with Digium's PCI telephony interface cards, Asterisk offers a strategic, highly cost-effective approach to voice and data transport over IP, TDM, switched and Ethernet architectures.
